Certificate

* This wood should not be used in ground contact or water as it has limited durability

*

Wood preservation product: The wood is treated with Wolmanit CX-8 (chemical inspection reg. nr. 4122), a biocidalproduct that contains copper (II) hydroxide carbonate, boric acid and copper HDO as active substances.

Penetration class: The wood meets the penetration class NP5 according to SS-EN 351-1, that means full penetration of wood preservation product in the sapwood.

Penetration of wood preservation product: The wood contains at least 9,0 kg wood preservation product/m3 sapwood.

Applications: Against rot and insects in usage class 3 according to SS-EN 335, that means above the ground.

Safeguards: Processing of the impregnated wood should be avoided. If that is not possible and if processing is done indoors, a normal breathing protection mask (half mask with particle filter P2), is needed, due to the wood dust, which can be dangerous if inhaled while breathing.

Waste management: Discarded timber and timber waste must be disposed of in accordance with the municipality's instructions.

Rot protection guarantee: The swedish wood protection industry provides a 20-year rot protection guarantee on NTR A- and NTR AB-classified wood to consumers in Sweden. Request a warranty card from your dealer. More information can be found at www.traskydd.com
